

***“The Use of Very Advanced Technologies and Artificial Intelligence in Personal Support and Care Services for Older Persons Living in Their Own Homes”***

(15 pages draft outline already available)

**Contact:** Dirk Jarré, President of  
The European Federation of Older Persons, EURAG  
E-mail: **[dirkjarre@aol.com](mailto:dirkjarre@aol.com)**

## Who We Are

EURAG is the oldest transnational non-governmental organisation of and for older persons – created already in 1962- with members in 28 European countries.

EURAG voices the needs and capacities of older persons in society. The organisation was a major actor in the EU research project on “Social innovation on active and healthy ageing for sustainable economic growth”

## Project idea

- By 2040: 1/3 of Europeans over 65 will be 80 and plus
- Around 80 % of older persons prefer to age in their home
- There will be a growing dramatic lack of professional carers
- Older persons want independence & self-determination
- Individualised responsive support & care technologies needed
- Use advanced technologies and artificial intelligence for AAL
- Not simple mechanical assistance but real support & care
- Users to be necessarily involved at all stages of creation
- Artificial intelligence solutions to be applied **intelligently!**

## Looking for

We are looking for partners who are:

- motivated in further developing the project idea
- interested in forming a project consortium
- are developers of AI applications in human services
- have the capacity to market products of the project
- believe in co-creation processes with the users
- can take over the project lead and coordination
