

A e-health solution targeted

At seniors

At informal caregivers

At landlords / developers

IANVS

Indoor Activity Notification for Vigilance Services

IANVS targets two main user groups. The purpose of the service is to keep elderly tenants longer at home to with better quality of life. It also boosts effectiveness of care personnel by automating their task reporting. To do so, serviced homes are equipped with IANVS' 3D sensor infrastructure which track persons with high precision in space. Tenants have a belt wearable and personal carry a badge. Their use is integrated in day-to-day activity of both tenant and care personnel, connecting them to advanced home-automation comfort services.
